Our Expertise

'With over 50 years of experience'

Flexitanks are a cost effective way to ship most non-hazardous / non-toxic bulk liquid products, including foodstuffs, industrial oils, natural and synthetic liquids.

Simple and convenient, Flexitanks offer an ideal alternative to traditional shipping methods including Drums, IBC's and in some cases, Isotanks and parcel tankers.

PPC Philton's one trip disposable Flexitanks offer a Food Grade, virgin quality, contamination free, strong and reliable system made entirely from recyclable materials.

With over 50 years of experience in bulk transit packaging, and an ever growing network of worldwide partners, who also offer operational and technical support, your product is safe in a PPC Philton Flexitank.

PPC Philton have three manufacturing facilities, based in Essex UK, Qingdao China and Bangalore India. All plants benefit from innovative and leading-edge manufacturing technology, as well as first class testing facilities.

Our plants were amongst the first to develop and register their quality standards under the ISO Q.A. certification scheme, with the UK plant becoming accredited to ISO9001 in 1989.

PPC Philton is an inaugural member of the Container Owner's Association (COA) Flexitank working group since its inception in June 2007, which was set up to promote best practise within the Flexitank industry, and has helped develop the current quality framework noted in today's PAS1008 Industry specification.

PPC Philton's flexitanks have successfully undertaken rail impact tests at both the TÜV Gortitz crash centre in Germany test report no. CFRT0004 and China Railways test report no. JGZX-FL-2019-1202 to demonstrate conformity with PAS1008, the COA Flexitank standard.

The quality of our Flexitanks have been confirmed by many of the world's leading Food and Chemical companies who have approved and request PPC Philton flexitanks to ship their products.

Flexitank Systems Offered

PPC Philton offer a full range of standard Flexitank designs suitable for 20', 30ft, 40ft, 45ft and 53ft containers, taut-liner/trailers and reefers. Various size Static Storage Flexitanks are also available.

The Flexitanks are made using high tensile seamless tubular FDA/European/BGA approved food grade films in sizes ranging from 5,000 litre to static storage Flexitanks of 36,000 Litre+.

PPC Philton Flexitanks can be made with a varied selection of valve sizes and positions, air vents, auto-vents, and numerous barriers to totally protect your products from moisture, oxygen, or other contaminants.

Our Flexitanks can be supplied with heater pads to heat the product at destination and insulation products to stabilize the temperature changes during its voyage.

Our Partners and their logistics support

PPC Philton has a strategically located global network of professional partners which continues to grow. This has enabled our team to offer a comprehensive service from supply- only, to a full door to door delivery service. Our carefully selected partners have been chosen because they hold the same values of professionalism and dedication to offering a best-in-class quality service.

All partners have undergone extensive PPC Philton training and are well equipped to handle your needs. Stocks are held locally to support your business where you need it.

Special Designs

PPC Philton also offer a range of Custom designed Special Flexitanks, created using FEA computer technology and our internal testing facilities.

These Special Flexitank designs include Bottom port full re-circulation flexis for mixing products before discharge; Flexitanks with extremely large aperture discharge for extremely viscous liquids or liquids that contain Large solid matter; Aseptic Flexitanks; Double Flexitanks for carrying 2 different products in the same container; as well as special Flexitanks for transporting bio organisms.

Manufacture & Testing

All raw materials used in the manufacturing process are of the highest quality and only purchased from approved suppliers. All materials are batch tested on-site before use in our PPC Philton Laboratories, to give complete confidence to our customers.

All raw materials are fully traceable back to source. Furthermore, PPC Philton 100% tests critical parts of the Flexitank during manufacture to ensure the highest standards within the industry are achieved, assuring our customers of a first-class product.

PPC Philton conducts testing on any new components prior to use with our range of custom designed computer-controlled simulation and testing equipment, including the worlds only 3 axis robotic Flexitanks/Container Tester.

Cost Effectiveness

PPC Philton Flexitank offers the most cost-effective means of shipping your product by:

- Reducing costs compared to other shipping methods.
- Stocking PPC Philton Flexitanks in various regions of the world
- Designing our products to reduce handling costs and time required during installation and loading.

- Maximising the cargo payload
- Reduced unloading time.
- Reducing residues left inside PPC Philton Flexitanks when compared to our competitors

Insurance

With a full manufacturing warranty of over USD 6 million against product defects, and covered by a UK AAA rated insurer, Aviva Insurance (Lloyds of London) you can be assured you are dealing with a reputable provider.

Environmentally Aware

PPC Philton Flexitanks should be 100% recycled where possible, and we support our clients in disposing of used Flexitanks in the most cost effective, socially acceptable, and environmentally friendly manner possible, in accordance with our ISO14001 Environmental standard certification.
